Message from the Guest Editor

Dear Colleagues,

Structural mechanics is an important field of engineering. The main goal of structural mechanics research is to ensure that the structures are safe and durable to prevent catastrophic situations, which can cause loss of lives, environmental pollution, and financial losses. Depending on the usage of the structure and the conditions that it is subjected to requires a special treatment during the analysis. Specifically, marine structures are subjected to harsh environmental conditions due to marine environment which can cause several different damage mechanisms including damages due to fatigue and corrosion. This Special Issue will provide a compilation of numerical, experimental and analytical studies related to “Marine Structures” research.
