

Postdoctoral Researcher in Topological Mechanics

I am looking to recruit a highly motivated and independent postdoctoral researcher to study, using theoretical and computational techniques, topics related to the dynamics of metamaterials, with specific interest in topological insulators. The position is available immediately, available for at least 1.5 years.

Interested researchers should have a strong background in topological mechanics and topological insulators, and should contact Prof. Park via email (parkhsAT_bu.edu) with the subject entitled "Postdoc Position", and send a CV, two relevant publications, and the contact information of three references. Preference will be given to candidates who already have a green card or are likely to be able to secure a visa in a timely fashion.
